PROFILE

AI/LLM engineer and Python backend developer with experience developing Dima, Bank Mellat's LLM-powered banking assistant at adanai, and building SelfMeter, an AI-powered psychological insight and self-assessment product delivered through a Telegram Bot and Telegram Mini App. Experienced in stateful agents, evidence-grounded LLM pipelines, retrieval, production APIs, and observability using LangGraph, FastAPI/Django, MongoDB/Redis, and OpenAI-compatible models.

EXPERIENCE

Developer | adanai Aug 2025 - Aug 2026

Dima - LLM-powered Smart Banking Assistant for Bank Mellat

- Developed Dima across conversational orchestration, tool contracts, backend integrations, testing, and production reliability.
- Designed stateful LangGraph/LangChain workflows for money transfers, bill payments, balances/accounts, FAQ/RAG, personal finance, favorites, reminders, insurance, and conversational routing.
- Integrated banking APIs through FastAPI and typed Pydantic models; implemented tool calling, structured outputs, validation, streaming, security boundaries, and resilient error handling.
- Built MongoDB-backed state/checkpointing, retrieval fallback and query rewriting, OpenTelemetry-based observability, automated tests, and Dockerized production runtime.

Freelance Software Developer | Self-employed 2017 - Present

- Design and build backend and full-stack applications with Python, Django/DRF, JavaScript/React, REST APIs, Telegram integrations, payments, and SQL/NoSQL data stores.
- Handle production delivery with Celery, Redis, MariaDB/MySQL, Docker Compose, Nginx/Caddy, GitHub Actions CI/CD, health/readiness checks, scheduled workers, and third-party APIs.

SELECTED PROJECT

SelfMeter | AI-Powered Psychological Insight & Self-Assessment Platform Personal Project

Live product: t.me/SelfMeter_bot?start

- Built and deployed SelfMeter as a Telegram Bot and React-based Telegram Mini App for psychological/personality self-assessments, personal profiles, and AI-generated Persian insight reports.
- Designed an evidence-grounded psychological AI pipeline that synthesizes multiple eligible assessment results into non-diagnostic insights on strengths, decision style, work/learning patterns, communication and relationships, emotional self-management, and growth directions; also supports compatibility insights.
- Implemented a multi-stage LLM workflow (analyze → synthesize → render → verify) with anonymized evidence packets, structured outputs, grounding/semantic validation, controlled retries, Celery/Redis async execution, and auditable stage/call/artifact records on Django/DRF + MariaDB.

RESEARCH

Graduate Research | LLMs for Structured Data Ongoing

- Research weight-frozen LLMs for NetFlow/structured classification, response-field representations, interface search, and few-shot behavior; design reproducible ablations and tabular baselines across Qwen, Llama, and Gemma.

EDUCATION

M.Sc. in Software Engineering | University of Tehran In progress

Focus: Natural Language Processing and Large Language Models

B.Sc. in Computer Engineering | Ilam University 2022

TECHNICAL SKILLS

AI / LLM: LangGraph, LangChain, Agentic Workflows, Tool Calling, Structured Outputs, RAG/Retrieval, Grounding, Prompt Engineering, In-context/Few-shot Learning, LLM Evaluation
Backend: Python, FastAPI, Django/DRF, Pydantic, REST APIs, Celery, Async Python, Telegram Bot API, OpenAI-compatible APIs
Data / Infra: MongoDB, Redis, MariaDB/MySQL, Docker, Docker Compose, Nginx, Caddy, GitHub Actions
Reliability: OpenTelemetry, Prometheus, structured logging, tracing, pytest, health/readiness checks, audit trails
Frontend / ML: React.js, Telegram Mini Apps, JavaScript, HTML/CSS | Tabular ML, XGBoost, tree-based models, experimental design, ablation studies
